

Two new Madeira voluminous effect threads

MADEIRA

Madeira launched the new metallic thread CR 20 and the new Frosted Matt 30.

After the launch of the new Madeira metallic thread CR 40, now the voluminous CR 20 Metallic with dtex 510 follows.

Optimised for easy use on industrial embroidery machines, the new thread runs smoothly with needle sizes 90/40 and San8 FFG 80/12.

CR 20 is ideal for opulent running stitches, decorative seams and voluminous fillings and is currently available in 16 oxidation-resistant metallic colours.

Also new is Frosted Matt 30, a matte and lightfast machine embroidery thread with dtex 180x2. Like its predecessor in weight 40, Frosted Matt 30, available in 96 colours, is resistant to bleach and chlorine and can be washed up to 60°C. The thread can be used for decorative seams, surfaces, 3D effects and thread mix elements with a matte finish.
